PHYSICS

(PRACTICAL)

Paper 3

$2\frac{1}{2}$ hours

Instructions to candidates

(a)   *Write your name and index number in the spaces provided above.*

(b)   *Sign and write the date of examination in the spaces provided above.*

(c)   *Answer all the questions in the spaces provided in the question paper.*

(d)   *You are supposed to spend the first 15 minutes of the $2\frac{1}{2}$ hours allowed for this paper reading the whole paper carefully before commencing your work.*

(e)   *Marks are given for a clear record of the observations actually made, their suitability, accuracy and the use made of them.*

(f)   *Candidates are advised to record their observations as soon as they are made.*

(g)   *Non-programmable silent electronic calculators may be used.*

(h)   *This paper consists of 11 printed pages.*

(i)   *Candidates should check the question paper to ascertain that all the pages are printed as indicated and that no questions are missing.*

(j)   *Candidates should answer the questions in English.*

Question one

You are provided with the following:

- a micrometer screw gauge (to be shared)
- a vernier calliper (to be shared)
- glass tube
- a wire labelled **M**
- some sellotape
- one 50 g mass
- some masses (totalling 40 g)
- a meter rule
- 100 ml beaker
- a stand boss and clamp
- a stop watch
- a source of light
- a screen
- some water
- a measuring cylinder

PART A

Proceed as follows:

(a)   Using a micrometer screw gauge, measure and record the diameter of the wire labelled **M**.

(1 mark)

d = ... mm
d = ... m.

(b)   Using wire **M**, make a spring as follows:

(i)   Use some sellotape to fix one end of the wire M (about 2.5 cm) along the glass tube;

(ii)   Hold firmly the part of the wire under the tape with one hand. Use the other hand to wind 30 turns as closely and tightly as possible. *(see figure 1)*

915030

Figure 1

(c) Remove the sellotape and release the spring from the tube.
(The spring will slightly unwind and some turns will disappear)
Bend the free ends as shown in **figure 2**.
Figure 2

(d) Using a vernier callipers, measure and record the external diameter **D** of the spring.

(1 mark)

D = ... cm

D = ... m.

(e) Suspend the spring and a 50 g mass from a retort stand as shown in **figure 3**.

Figure 3
Kenya Certificate of Secondary Education, 2015
232/3
02315190

Turn over

Count and record the number of turns **N** of the suspended spring. (1 mark)

N = ...

(f) Add 40 g to the 50 g mass and record the extension **X** of the spring due to the 40 g.

(1 mark)

X = ... cm

X = ... m

(g) Determine **c** given that (1 mark)

$$c = \frac{0.4}{X}$$

....

....

(h) Determine **n** given that (2 marks)

$$c = \frac{nd^4}{8ND^3}$$

....

....

....

....

(i) With the spring still loaded with the 90 g, pull the lower mass slightly downwards and let go so that the mass oscillates vertically. Record the time **t** for 20 oscillations. Hence determine the period **T**.

t = ... (s) (1 mark)

T = ... (s) (1 mark)

(j)   Determine Z given that

$$T = 2\pi \sqrt{\frac{m}{Z}}$$

where m is the mass in kg on the spring.   (2 marks)

....

....

....

....
PART B

Proceed as follows:

(k)   Place the 100 ml beaker on a meter rule and pour 80 cm³ of water into it. Arrange a lamp (source of light) and a screen on either side of the beaker. *(see figure 4)*

Figure 4

(l)   Adjust the position of the lamp on the metre rule so that its centre is a distance **u** = 12 cm from the beaker. Switch on the light. Adjust the position of the screen until a well focused vertical line *(the image of filament)* is formed on the screen. Measure and record in **table 1** the image distance **V** between the screen and the beaker.

(m)   Repeat part (l) for other values of **u** shown in **table 1** and complete the table.

Table 1

Distance u (cm)	12	16	20
Distance V (cm)			
$y = \dfrac{uv}{u+v}$			

(4 marks)

(n)   Determine **m**, the mean value of **y** using the values in **table 1**.   (1 mark)

m = ...

915030

(o) (i) With the meter rule outside the beaker, measure the height **h** of the water meniscus above the bench. (1 mark)

h = ... cm

(ii) Determine the value of **P** given that (1 mark)

$$P = \frac{5}{\sqrt{h}}$$

....

....

(iii) Hence determine the value of f given that $f = \frac{P}{2m} + 1$ to one decimal place. (2 marks)

....

....

....

....

Question two

You are provided with the following:

- an ammeter
- a voltmeter
- two cells (size D)
- a cell holder
- a switch
- a wire labelled **L** mounted on a millimetre scale
- a micrometer screw gauge (to be shared)
- six connecting wires at least four with crocodile clips

Proceed as follows:

(a)   Using a micrometer screw gauge, measure and record the diameter **d** of the wire **L**.

(1 mark)

d = ... mm

d = ... m.
(b)   Place the two cells **in series** in the cell holder and use the voltmeter to measure the total electromotive force (emf) E_0 of the battery.   (1 mark)

E_0 = ... V.

(c) Starting with the switch open, connect the circuit as shown in **figure 5**. **P** and **Q** are points on the wire **L** such that **PQ** is 60 cm. *(PQ should remain 60 cm throughout the experiment)* **N** is a point on the wire such that **PN** is 10 cm (0.1 m).

Figure 5

(d) (i) Close the switch and record the current I.   (1 mark)

I = ... A.

(ii) Measure and record in **table 2** the potential difference across **PN**.

(iii) Measure and record the potential difference across **PN** for the other values of **PN** shown in **table 2** and complete the table. *(The current is expected to remain constant)* Hint: *The switch should be closed only when reading the voltmeter.*

915030   **Turn over**

Table 2

Length PN (m)	0.1	0.2	0.3	0.4	0.5	0.6
p.d (V)						
Resistance $\left(\dfrac{V}{I}\right)$ Ω						

(6 marks)

(e)   On the grid provided, plot a graph of resistance (y-axis) against length.   (3 marks)
(f)   From the graph, determine:

(i)   the slope **S** and its units.   (3 marks)

....

....

....

....

....

....

(ii)   the constant **k** and its units given that

$$S = \frac{4k}{\pi d^2}$$ (3 marks)

....

....

....

....

....

....

(g)   Determine constant t given that

$$t = \frac{E_0 - V_n}{I}$$

where V_n is the p.d at PN = 0.6 m.   (2 marks)

....

....

....

....
